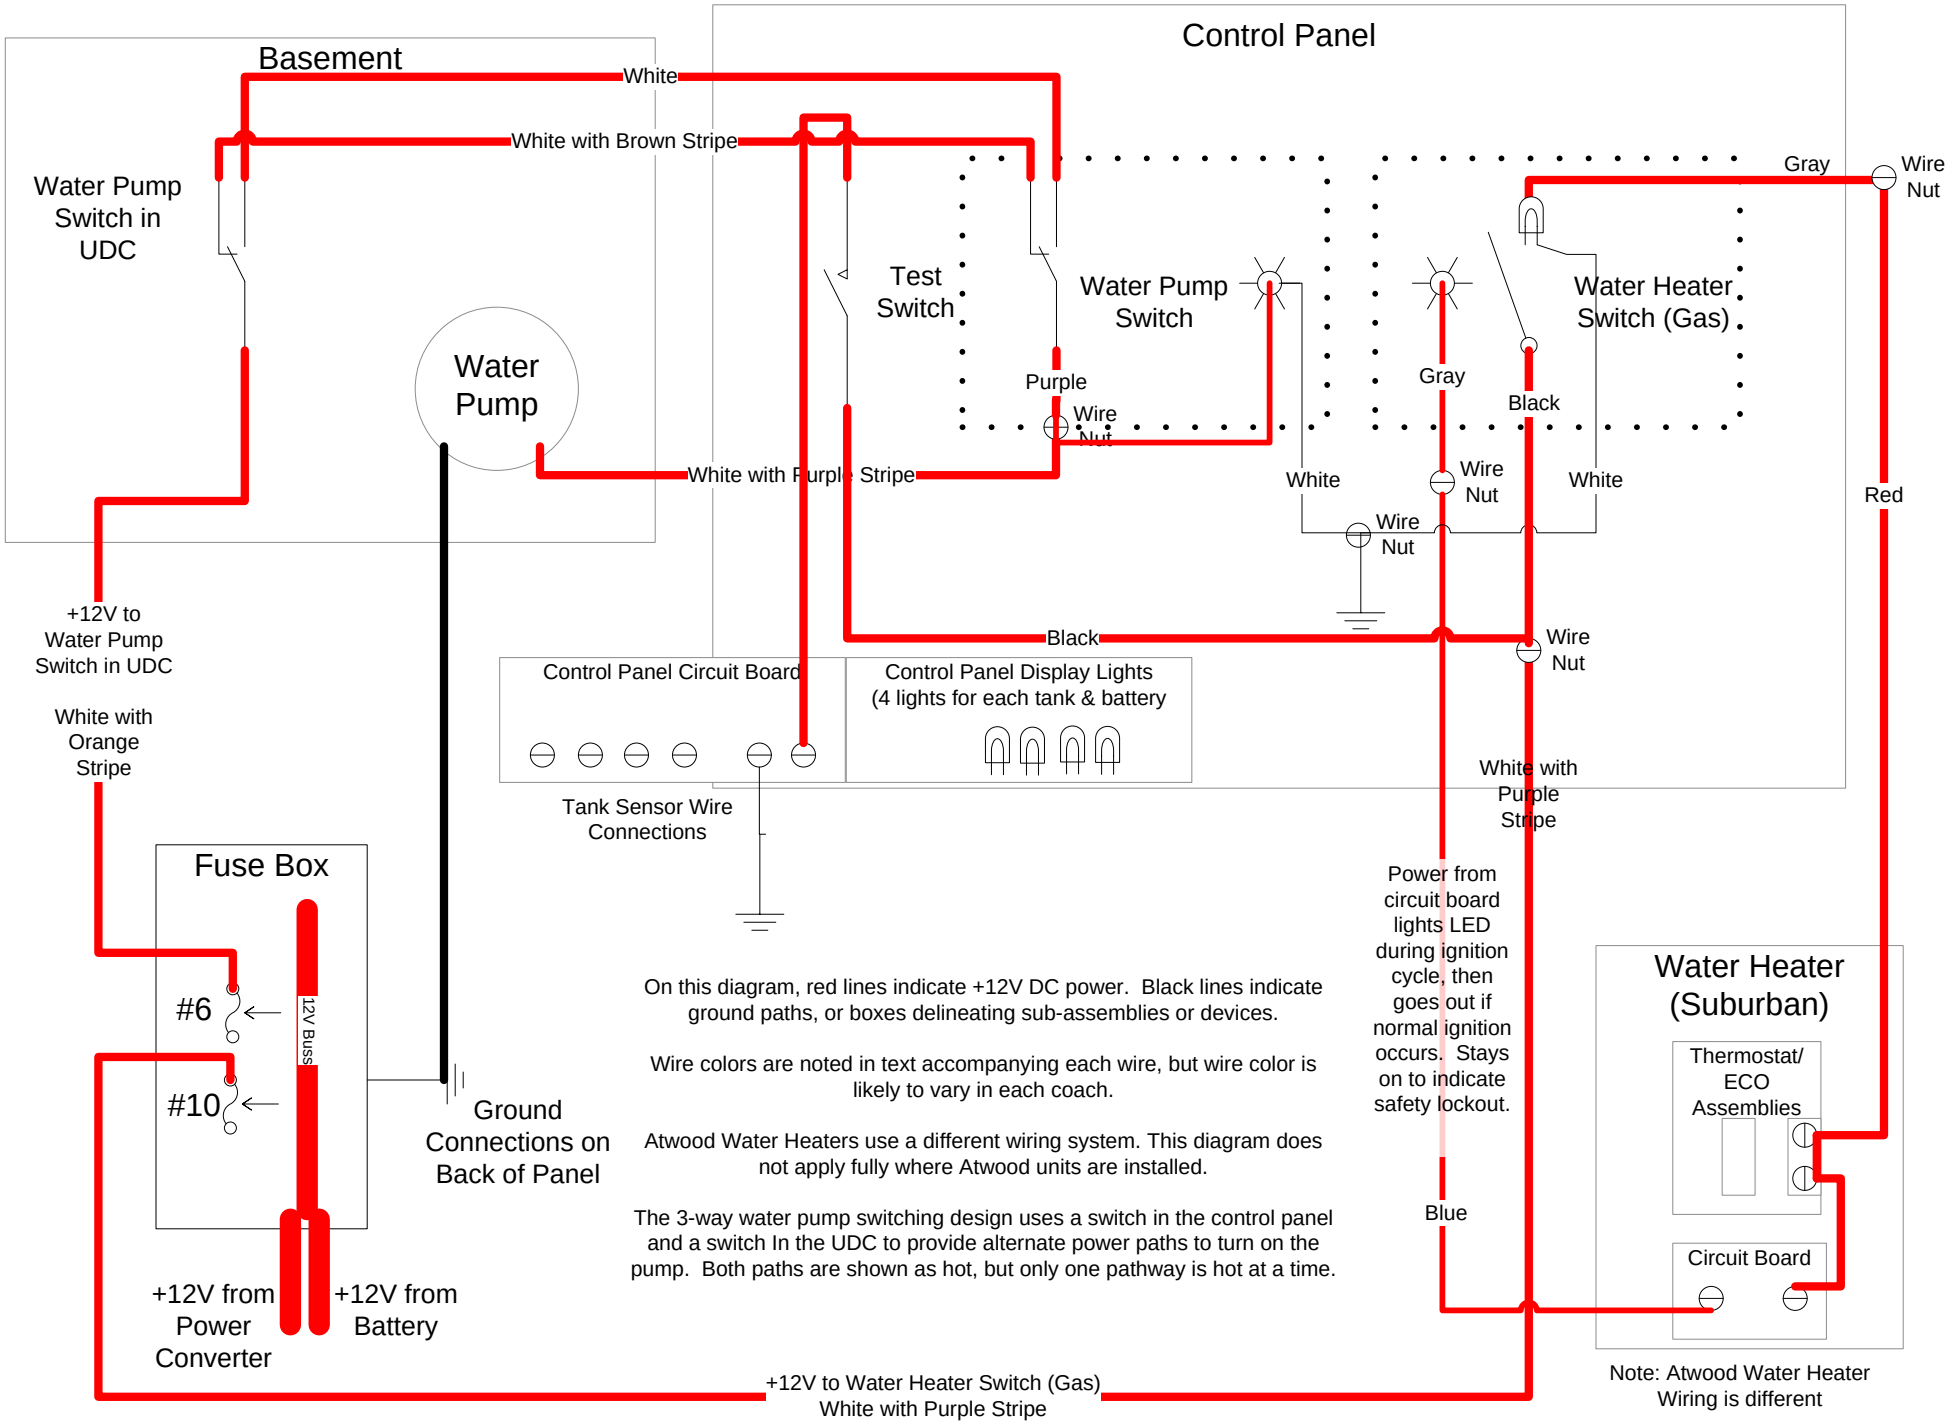
Partial Wiring Diagram of Control Panel Switches and Indicators

This diagram is based on a 2012 Landmark.

Actual wire colors, fuse locations and other details may vary by model and year of manufacture



On this diagram, red lines indicate +12V DC power. Black lines indicate ground paths, or boxes delineating sub-assemblies or devices.

Wire colors are noted in text accompanying each wire, but wire color is likely to vary in each coach.

Atwood Water Heaters use a different wiring system. This diagram does not apply fully where Atwood units are installed.

The 3-way water pump switching design uses a switch in the control panel and a switch In the UDC to provide alternate power paths to turn on the pump. Both paths are shown as hot, but only one pathway is hot at a time.
